

Barrick Africa Responsibility

2006 Environmental, Health, Safety & Social Performance

CORPORATE SOCIAL RESPONSIBILITY CHARTER

At Barrick, we are committed to making a positive difference in the communities in which we live and work.

We recognize that responsible behavior is our calling card, creating opportunities to generate greater value for our shareholders, while at the same time fostering sustainable development in the communities and countries where we operate.

We strive to earn the trust of all with whom we interact, whether they be our employees, the communities where we live and work, the governments that host us, or any other persons or parties with whom we engage in the sustainable development of mineral resources.

We endorse the definition of Corporate Social Responsibility as proposed by the World Bank:

Corporate Social Responsibility is the commitment of business to contribute to sustainable economic development - working with employees, their families, the local community and society at large to improve the quality of life, in ways that are both good for business and good for development.

The Four Pillars of Barrick's Approach to Corporate Social Responsibility

The following pillars guide Barrick in its conduct of business around the world. Regional business units and management groups are accountable for complying with this Charter consistent with regional and local priorities.

ETHICS

The Barrick Code of Business Conduct and Ethics mandates that we conduct our business with the ethical standards set forth in that Code and in accordance with all applicable laws, rules and regulations. We strive to act as a responsible corporate citizen and lend our expertise to help engage in constructive public dialogue and informed debate on issues of importance to the Company, the mining industry and the communities in which we operate.

ENVIRONMENT, HEALTH AND SAFETY

Barrick has a responsibility to protect, reclaim and enhance the environment on the sites that we operate. We encourage wise environmental stewardship and diligently apply proven management controls to achieve this goal. Through our comprehensive environmental management programs, we are committed to ensuring that environmental effects are being adequately addressed; controls are in place to ensure compliance with corporate environmental policies and obligations; environmental management activities are supported by adequate resources and financial provisions, and that plans are in place to ensure that the environment is protected for future generations and that the sustainability of nearby communities is safeguarded.

At Barrick, we are committed to performing every job in a safe and healthy manner. Barrick expects all employees and contractors to work in accordance with company safety and occupational health management policies for the benefit of each one of our colleagues, families, communities and business. Through the Barrick Safety and Health System, we provide the equipment, training and resources necessary to enable employees to work safely. Our goal is to have every employee go home in good health and uninjured, after every shift, each and every day.

EMPLOYEES

Barrick is committed to developing the full potential of our employees. We respect and value each of our employees and observe the fundamental tenets of human rights, safety and nondiscrimination in the workplace. We fairly compensate our employees for their contributions, provide meaningful performance feedback to them and offer them professional development and training opportunities. We encourage accountability and employee involvement in issues affecting the workplace to help improve safety and work conditions, as well as our efficiency and our business. We also recognize that best practices in this important area continue to evolve and that, accordingly, we must learn and evolve as a business as well.

COMMUNITY

Barrick fully considers social, cultural, environmental, governmental and economic factors when evaluating project development opportunities. In those communities in which we operate, we interact with local residents, governments, non-governmental organizations, international agencies and other interested groups to facilitate long-term and beneficial resource development. We give priority to building partnerships in entrepreneurial endeavors that contribute to enhancing local capacity and we also commit to providing financial support of organizations through our charitable donations, budgets and policies. The employment of indigenous peoples and local community members is also a priority. Barrick respects the interests of all members of the communities in which we conduct business and encourages open and constructive dialogue and interaction with them. We take the responsibility to listen carefully, be responsive and provide information that is accurate, appropriate and timely.

Introduction

In past years Barrick has provided brief site performance reports for our operations that are available on the Barrick website. In order to improve our stakeholder communications, we have now developed annual regional reports to provide a more useful tool for understanding the social responsibility performance, challenges and successes of our Company.

This first Africa Regional Responsibility Report communicates performance results for our operations in the African Region. It provides information on environmental, health & safety and social performance and includes data tables for each operation at the end of the report. The 2006 Africa Responsibility Report augments Barrick's 'Corporate' Responsibility Report available on our website at www.barrick.com.

Barrick formally defined its commitment to meet the highest standards of responsible mining by developing the Corporate Social Responsibility Charter. Today, the Charter is a living document that guides the direction of the Company and our conduct, based on a commitment to business ethics, environmental stewardship, employee health and safety, and community development. The Charter is provided on the inside front cover of this regional report.

We encourage you to provide feedback on this report and on our sustainability activities. We look forward to hearing your opinion regarding our performance.

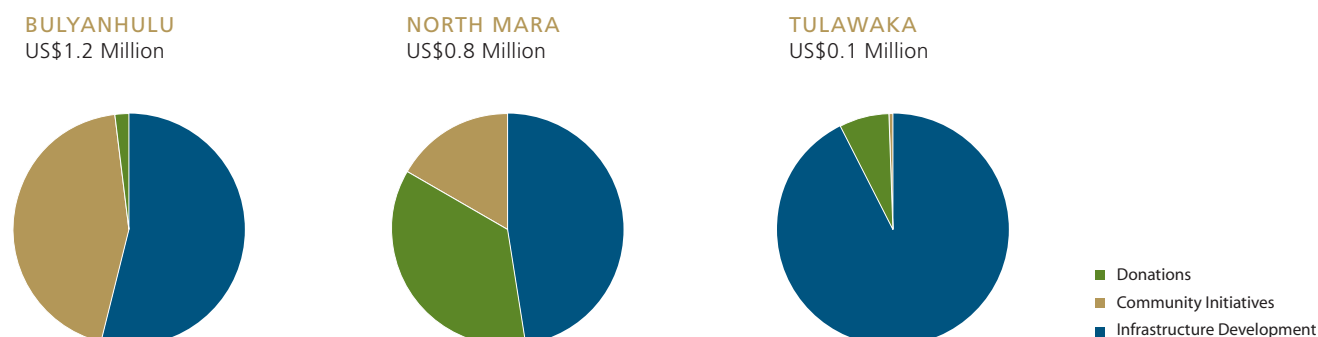

"Responsible mining forms the foundation of everything we do."

— Greg Wilkins, President and CEO, Barrick Gold Corporation

2006 Performance Snapshot

2006 Community Involvement

Barrick is committed to bringing long-term sustainable benefits to our communities. One way we do this is by buying locally and supporting community programs and projects, initiatives and infrastructure development in the vicinity of our operations.

Value Added in 2006 (USD)

Donations	\$ 321,000
Infrastructure Development	\$ 1,110,000
Community Initiatives	\$ 655,000
Local/Regional Procurement	\$104,900,000

2006 Environmental, Health & Safety Performance

Regulatory Actions	0
Permit Exceedences	0
Spills Escaping Containment	0
Total Land Reclamation	46 hectares
Total Medical Treatment Injury Rate	1.7
Environmental Training Hours	3,974
Health & Safety Training Hours	20,487
Emergency Response Training Hours	4,043

2006 Highlights

- AIDS Clinic Opens at Bulyanhulu (see page 12)
- Tulawaka Sets New Barrick Safety Record (see page 8)
- Barrick Focuses on Education in 2006 (see page 10)

Africa

Regional Business Unit

● Mine ▲ Project

Tanzania

Bulyanhulu (100% owned)

The Bulyanhulu gold mine is located in northwest Tanzania, approximately 55 kilometers south of Lake Victoria and approximately 150 kilometers from the city of Mwanza. Bulyanhulu is an underground operation using long-hole and drift-and-fill as its principal stoping methods. Ore reserves are accessed via a surface shaft and an internal ramp system. The process plant consists of a crushing and grinding circuit, a gold/silver/copper flotation circuit, a tailings thickening/filtration circuit and a tailings storage facility. There are approximately 1,600 workers at the Bulyanhulu gold mine.

Tulawaka (Joint Venture 70% owned)

The Tulawaka gold mine in Tanzania is a 70/30 joint venture between Barrick and Northern Mining Explorations Ltd. The site is located approximately 1,000 kilometers from Dar es Salaam and 120 kilometers west of Barrick's Bulyanhulu Mine. The Tulawaka Mine began production in the first quarter of 2005. It is an open-pit operation, recovering half the gold with gravity separation technology and the balance from conventional carbon-in-leach technology. There are approximately 250 workers at the Tulawaka mine.

The Region – An Overview

Tanzania

North Mara (100% owned)

The North Mara gold mine is located in the northwestern part of Tanzania in the Tarime District of the Mara Region, approximately 100 kilometers east of Lake Victoria and 20 kilometers south of the Kenyan border. The North Mara Mine consists of three open-pit deposits – Gokona, Nyabirama and Nyabigena. There are approximately 1,000 workers at the North Mara gold mine.

Tanzania

Buzwagi Project (100% owned)

The Buzwagi development project is located in northwest Tanzania, approximately 80 kilometers south of Barrick's Bulyanhulu Mine. Buzwagi received its Mineral Development Agreement from the Tanzanian government in February 2007 and received Environmental Impact Assessment approval in May 2007. The project will be an open-pit operation with a gravity-leach circuit. Pre-stripping/mining activities are expected to begin in 2008.

South Africa

Sedibelo Project (Joint Venture Project)

The Sedibelo Project is a large, advanced exploration platinum project acquired through the Placer Dome acquisition in 2006. Sedibelo is located on the western limb of the Bushveld Complex in South Africa, about 200 kilometers from Johannesburg. Barrick's partner is the Bakgatla Ba Kgafela (BBK). Barrick's community partnership exceeds requirements under South Africa's Black Economic Empowerment program.

Tanzania

Kabanga (Joint Venture Project)

The Kabanga advanced exploration nickel project is located 385 kilometers west of Bulyanhulu and 200 kilometers west of Tulawaka. This project is operated by our joint venture partner Xstrata.

Environmental Responsibility

At Barrick, a key component of our business strategy is to protect, maintain and enhance the environmental resources on the sites where we operate. Within the Africa Region, as at our other regions across the globe, we work to achieve this goal through environmental stewardship and effective management controls.

2006 Environmental Performance

The Africa Region continues to work towards the goal of eliminating all site environmental incidents and achieving 100 percent regulatory compliance. This includes ongoing efforts to improve procedures and policies and upgrade site infrastructure.

There was one spill in the region which left the mine property in 2006. At the North Mara mine, approximately 750 liters of water overflowed from the Tailings Dam Sediment Trap (TDST) outside second level containment and onto the ground outside mine property due to a malfunctioning pump. Corrective measures were taken to pump the water back into the tailings dam and repair the TDST pump. There were no environmental impacts.

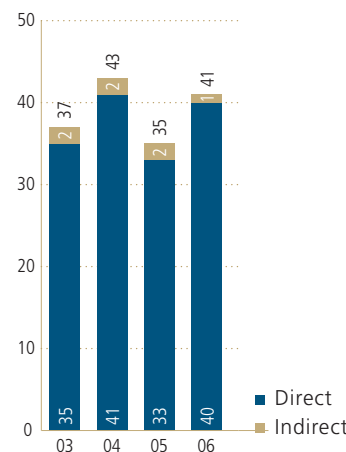

Collecting water sample for analysis.

Protection of wildlife is part of environmental management at our operations. Because some process solutions are harmful to wildlife, we take measures such as netting and fencing to prevent wildlife from coming

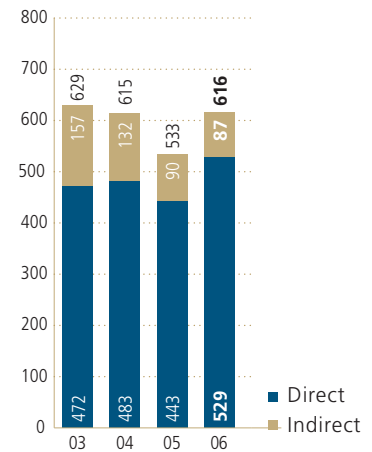

WATER USE BY MINING AND PROCESSING
In Liters Water / Tonne Ore Processed

GREENHOUSE GAS EMISSIONS
Kilograms CO₂e / Tonne Ore Processed

ENERGY USE
Megajoules Energy / Tonne Ore Processed

Environmental Responsibility

into contact with these materials. In spite of our efforts, three Crested Cranes died after exposure to chemical solutions at the North Mara tailings dam.

Water Management in the Africa Region

Water is a critical concern for Barrick and continues to be a vital issue for many of our stakeholders. We are committed to responsible management of this precious resource at our sites in the Africa Region.

Bulyanhulu is the first gold mine of its size to use surficial paste tailings technology. Conventional slurry tailings contain 40-45 percent liquid. The filtering process used to create paste tailings removes additional water leaving only 20-30 percent within the paste. These paste tailings are then stored on land in an engineered containment structure. Liquid removed is directed back to the process plant for reuse and the filtering process allows the process plant to recycle up to 95 percent of its water requirement. This significant use of recycled water results in a sizeable reduction in water extraction from Lake Victoria.

The Tulawaka Mine operates on a “zero discharge” policy for cyanide-bearing solution. The Tailings Storage Facility incorporates an impoundment structure adjacent to the Waste Rock Dump. It is used to contain the tailings generated by the ore processing operations. This procedure used by Tulawaka exceeds the standard in tailings management in the country.

Water quality monitoring at the North Mara Mine consists of ground and surface water sampling points strategically set upstream and downstream of the project area to monitor the impact of mining activities on the surrounding water systems. This monitoring system allows continual assessment of groundwater quality and helps ensure that no underground water contamination occurs. As well, tailings pipelines are encased within a secondary containment that provides an extra measure of protection should there be a spill of contaminated tailings water.

The Cyanide Code’s Mission Statement

“To assist the global mining industry in improving cyanide management, thereby minimizing risks to workers, communities and the environment from the use of cyanide in gold mining, and reducing community concerns about its use.”

The North Mara Mine is the only mine site in Tanzania to have its own environmental laboratory onsite, which provides for quick analysis of water samples. The construction of the laboratory started in 2004 and the lab opened for operation in mid-2005. The laboratory is led by a qualified Tanzanian chemist assisted, by two laboratory technicians. On a quarterly basis, all water samples are sent to a third-party laboratory for analysis.

Cyanide Management

For over a century, cyanide has been the primary reagent used by the mining industry for the production of gold. It is a hazardous chemical that requires careful management. The International Cyanide Management Code for the Manufacture, Transport and use of Cyanide in the Production of Gold (“the Code”) was developed to ensure the responsible management of cyanide. A third-party cyanide code assessment for all operational sites in the Africa Region is scheduled to be completed by third-quarter 2008. Tulawaka’s use of “Cyanide Destruction Technology” is another milestone in the Tanzanian mining industry. The design of the process plant at Tulawaka includes the cyanide destruction plant designed to destruct cyanide to a 96 percent destruction efficiency.

Environmental Responsibility

Pelicans near the Tulawaka Mine.

Closure and Rehabilitation at Tulawaka

Barrick is committed to complete rehabilitation and reclamation in a progressive manner for all disturbed land when it is no longer required for mining operations.

For example, at Tulawaka, our aim for responsible closure and rehabilitation includes:

- To physically, chemically and biologically stabilize the land,
- To support the return of flora, insects and fauna species,
- In cooperation with local government and people, ensure that the community rehabilitation program for degraded land within the surrounding communities is successful.

It is anticipated that the Tulawaka gold mine would be Barrick's first gold mine to undergo closure in Africa. Tulawaka developed an interim reclamation and closure plan and started the implementation of the closure initiative prior to operation of the mine. The final land use value is proposed to be the re-establishment of the forest reserve and relinquishment of the property to the Tanzanian Ministry of Natural Resource and Tourism. In order to re-establish the forest reserve, Tulawaka has initiated a program to conserve the surrounding forest and implemented stringent procedures to conserve flora and fauna.

As part of the closure program, an on-site nursery is maintained to serve as a reliable native species seed stock. Seeds are collected from the forest reserve then nurtured to seedlings ready for rehabilitation. Similar initiatives have been implemented in communities near our other African operations where the mines will help support the community in indigenous plant awareness, and the supply and planting of seedlings.

Health and Safety Responsibility

Like all Barrick regional business units, the Africa Region has an ongoing commitment to the health and safety of our employees and contractors. Work-related injuries are not acceptable and it is integral to our business that all our workers go home safe and healthy everyday. This vision is a culture that Barrick strives to instill in its employees so that whether they are at work or at home, they are doing whatever is needed to act in a safe and responsible manner.

Health and Safety Performance

The health and safety of our employees and contractors is a top priority in the Africa Region. We are committed to eliminating or controlling workplace hazards for the protection of our workers in support of the Barrick Vision: “Every person going home safe and healthy every day.” We believe that everyone is responsible for workplace safety. In 2006, we initiated several health and safety programs that will continue to increase employee awareness. These programs provide our employees and contractors with a clear understanding of their rights, responsibilities and accountabilities in creating and maintaining a safe workplace for all.

The Barrick Safety and Health System was introduced to the Africa Region as early as 2004. The Safety System consists of eight elements which are being phased in over time throughout the Company. The key to the success of the system is a commitment to leadership and a common vision of workplace safety. Courageous Leadership training for our personnel began in 2004 at Bulyanhulu, 2005 at Tulawaka and 2006 at North Mara. We fully expect the results from Courageous Leadership training to continue to build as new workers are oriented into the system and refresher courses designed to sustain the momentum continue to roll out.

For the second year in a row Tulawaka has won Barrick’s Chief Executive Officer’s Award for Best Overall Safety Performance. Tulawaka completed 2006 with no lost-time

injuries. This brings our record to six million man hours without a lost-time injury. The site also received the Gold Site Performance Award for their health and safety performance. Additionally, two employees were specially honoured with the title of “2006 Safety Champions.”

Other sites around the region were recognized for their health and safety performance as well. A Safety & Health Award of Merit went to our Buzwagi project; a Gold Site Performance Award was presented to Buzwagi; and a bronze Site Performance Award went to North Mara. North Mara also won the Community Safety Award, which was awarded by the Nyarwana Village Leaders for ensuring the safety and security of Barrick exploration drilling.

The Africa Region’s health and safety performance for 2006 reflects a continued focus on safety with a regional lost-time injury rate of 0.3 and a total medical injury rate of 1.7. This represents a solid result for the region with all sites improving on their previous records for total medical injury rate.

However, these gains were overshadowed by two fatalities. We deeply regret that one of our employees at Bulyanhulu and one at North Mara were fatally injured during the year. The incidents were thoroughly investigated, with lessons learned being shared across the organization.

Emergency response training is provided regularly to the Emergency Response Teams and other workers at our

Health and Safety Responsibility

Emergency Response Drills prepare our emergency response teams to respond to incidents in a professional manner.

Tulawaka

Best Overall Safety Performance:

The Chief Executive Officer's Award

"This award is a source of tremendous pride and joy for Tulawaka. Everyone at the mine is committed to the zero incident culture and it is because every individual has planned and conducted his or her work in a competent and professional manner that we can live up to our safety ideal of every person going home safe and healthy every day. We are immensely proud of this achievement."

mines. It includes mine rescue, hazardous materials handling, fire-fighting, crisis management and incident command training. Emergency response drills are routinely conducted. These mock emergencies assist mine employees and the Emergency Response Team to assess their readiness to respond to an actual emergency.

Employee Development at Bulyanhulu

Recruiting, motivating and retaining the best people are critical success factors for our operations in the Africa

Bulyanhulu operates a medical center for employees, their families and local communities.

Region. We do this by offering our employees educational opportunities, skills development, attractive salaries and culturally targeted benefits. We respect and value the men and women who work for us and are committed to fair employment practices, and a workplace in which all individuals are treated with dignity and respect and are free from harassment and discrimination.

As one approach to attracting the best people, Bulyanhulu continued to construct employee housing under the employee house loan program. In 2006, 42 houses were built, bringing the total to 471 houses constructed to date. We anticipate building an additional 150 homes in 2007 to meet the increasing demand due to our expanding workforce.

Bulyanhulu is currently implementing an ambitious human resource development plan to increase the development of its Tanzanian workforce. The development plan specifically addresses succession planning as well as housing and overseas training for our employees. Since 2000, Bulyanhulu has sent over 80 employees to countries such as South Africa, Australia, Canada, the United States, and Germany for specialized and technical training. Bulyanhulu is also sponsoring four employees who are currently pursuing four-year degree studies in Australia in Mining Engineering and Minerals Processing disciplines.

Community

At Barrick, our commitment to making a positive difference in the communities in which we operate is integral to our vision of “building mines, building value.” Within the Africa Region we are dedicated to bringing long term benefits to our local communities as well as all relevant stakeholders. We focus on achieving this goal through continuous, open and honest communications.

2006 Performance

In 2006, we continued our commitment to community relations and engagement. For instance, the Africa Region contributed more than US\$2.1 million in sponsorships and donations to the communities in which we live and work. This funding was spread across the various areas of education, health, and community infrastructure with all funding focused towards bringing long- term and sustainable benefits to our communities.

As well, Barrick is committed to local spending and local employment within the Region. Our goal is to employ local people whenever possible at our operations and to encourage local and regional procurement. Salaries, wages, capital expenditures, purchases of goods and services, and payment of taxes and royalties all provide economic value to the regions where we operate. For example, the Africa Region spent US\$105 million on regional purchases of goods and services in 2006.

Sustainable Development in the Africa Region

The Bulyanhulu Mine, along with local community groups and the Tanzanian Government, is committed to the support and development of local farmers. At its Bulyanhulu mine, Barrick has partnered with its catering service provider, Sodexho, to develop the Farmers Support Scheme. Our full-time agriculture development officer is working closely with Sodexho to provide training programs and focus groups to 240 local small-scale farmers in villages surrounding the mine. They are taught practical skills and improved methods for farming their lands and keeping poultry. Local produce purchasing has since increased from 12 percent to 21

Participants listening attentively during an agri-business session.

percent and this has generated an average income of US\$50,245 per month in eight villages.

Training farmers is a tool which improves the economy of local communities, maintains sustainability of the environment, and involves farmers in the national economy.

At the Tulawaka Mine, a Community Development Committee has been established and, working with other community development committees, coordinates local community development projects. For example, in the community of Mavota, with Barrick’s help, the local police station was expanded and upgraded to accommodate the increasing community population. Also, as of 2006, four water wells have been successfully commissioned and maintained giving residents safe and clean water close to their homes and farms. The construction of these wells eliminates the need for residents to locate and collect water many miles from their homes, thus allowing them to

Community

Training programs teach farmers practical agricultural skills.

focus their efforts towards maintaining and improving their farms and livestock.

North Mara is committed to the support of The Heifer Project, Tanzania. The goal of this project is to minimize infant mortality rates for children below five years of age by providing a way for families to obtain nutritional milk and milk products. The project, started in 2005 and implemented in 2006, trained seven farmers from seven families in animal husbandry at the Mogabiri Farmers Training Center-Tarime before heifers were donated from the Heifer Project. In return for the heifers, the families agree to give another family in need their heifer's first calf, thus adopting the Heifer Project's Principle "Receive the heifer, give away the calf."

Education in the Africa Region

Barrick's Africa Region continues to support and donate funds towards the educational needs of the communities in which we live. We realize that education is the basis of development and is instrumental in fighting poverty in our communities.

As part of its commitment to local community development, Barrick's Bulyanhulu Mine has spent over US\$2 million to strengthen education in the local area. This included construction of the first secondary school in the Bugarama ward and development of numerous primary schools. Barrick has worked in partnership with CARE International and the Tanzanian government to deliver a range of education supports, including teacher

Nyabichune Primary School near the North Mara Mine.

training, promotion of education in communities, donation of materials and equipment, and an employee sponsorship program. As a result of these efforts there have been significant improvements in facilities and education standards. The new secondary school has grown from 82 students in 2005 to over 430 this year. In 2005 one local primary school scored the highest in the district and was ranked 16th out of 11,000 schools nationally. One hundred and fifty orphaned students who normally would have been excluded are now able to attend school and four highly promising students have attended the International School. One of these students has been so successful in his studies he was awarded the International Leader of Tomorrow Award from The University of British Columbia in Canada where he will receive full tuition and living support from 2008 to undertake an undergraduate degree.

The North Mara Mine supports local students from primary level on through to higher levels of study. Currently the mine sponsors 22 students who have been endowed with full education scholarships. In addition, North Mara participates in a royalty driven fund with five local villages to promote education. A total of 650 students are being sponsored through this program.

Education does not end with the children. In all parts of the Africa Region, Barrick continues to support training for our local communities. For instance, village council members attend leadership training sessions to gain the necessary leadership and partnership skills to assist them with community development. Also, Barrick has begun

Community

the second phase of construction on a skills center for the Incubator Project in North Mara. The project will train local individuals in different skills such as welding, carpentry, mechanics, electrical works, etc. With these marketable skills, graduates of the program can apply for employment at not only the mine site, but elsewhere in Tanzania. It is anticipated that the center will be completed in 2007.

Healthy Communities

Barrick is committed to the health of the communities in which we operate. In 2006, the Africa Region committed to numerous health-related programs and sponsorships.

HIV/AIDS

HIV/AIDS is a major health problem globally. Sub-Saharan Africa is the world's most severely affected region and, with only 10 percent of the world's population, it accounts for approximately two-thirds of the global total of people living with HIV/AIDS. One in 12 adults in this region is reported to be infected with HIV.

Barrick continues with our commitment to the fight against HIV/AIDS by implementing a range of multi-faceted programs tailored to address the local needs around our mine sites. The programs are aimed at both our employees and the local community, and encompass prevention, treatment, counseling and care. We are actively working with community members in creating awareness and encouraging people to test, treat and seek counseling for HIV/AIDS where needed.

The Bulyanhulu Mine operates the Kakola VCT Center that provides free medical services including voluntary counseling and testing for HIV, syndrome management of sexually transmitted infections (STIs), and family planning and support services for People Living with HIV/AIDS (PLHA). The center has been operational since February 2006 and is working with local community groups such as Buyange women's groups, MWANO, KSSK and Life Skills to escalate the HIV prevention campaign through education awareness.

Bulyanhulu employees and Peer Educators in the new clinic.

Bulyanhulu also supports training programs for the Village AIDS Committees (VAC) of Ilogi, Bugarama, Busuluwangili and Buyange to enable them to implement HIV/AIDS prevention programs in their respective villages. In addition, we are currently working towards purchasing a mobile clinic that will extend HIV/AIDS services to the more remote communities in the Region.

The North Mara Mine has teamed up with African Medical and Research Foundation (AMREF) on several initiatives in the fight against HIV/AIDS. For instance, a AMREF medical center in Nyangoto has been opened to provide HIV/AIDS, Malaria and STD awareness, counseling and treatment services. In addition, North Mara and AMREF are working together on a program to involve community members in educating each other on HIV/AIDS as well as other STD's. AMREF provides the technical staff and the North Mara employees and local community members make up the focus group in the program. In September 2006, North Mara and AMREF hosted the first community health day in Nyangoto where approximately 300 community members participated.

Malaria Control

Malaria is another major health issue that poses a serious threat to our community members and employees in the Africa Region. In response to this disease, Barrick has implemented a Community Participation Vector Control Program (VCP). The VCP will conduct educational seminars to control Malaria and participate in community efforts to protect residents from this deadly disease.
